

Connection Impact Assessment (CIA) Fee Schedule

Distributed Energy Resources (DER) with a nameplate sizes >10kW are subject to Canadian Niagara Power CIA fees as noted in the table below.

The following fees are to complete the CIA study only. Additional interconnection cost will apply based on each project during the Connection Cost Agreement Stage.

Nameplate Size	Fee
10kW < Size ≤ 50kW	\$3,500+HST
50kW < Size ≤ 500kW	\$3,500+HST
500kW < Size ≤ 1MW	\$7,500+HST
Size > 1 MW	\$10,000+HST

DERs greater than 1 MW will also require a Transmitter CIA while those DERs greater than 10 MW also require a System Impact Assessment (SIA) to be completed.

The actual costs for a CIA may vary depending on the specific DER. You'll be advised of further costs associated with the processing and implementation of your DER project.

You must also file any material revisions to the design, planned equipment or plans for the DER facility with Canadian Niagara Power and a new CIA will be prepared as per Distribution System Code (DSC) section 6.2.15. The new CIA will be performed at the applicant's expense.
